How You Can Enjoy Better Water...

Clean, clear water is the most important thing we put into our bodies. Next to air, it's the substance most necessary for our survival. 60-70% of our total body weight is made up of water which constantly circulates, cleanses, and renews the body.

Consider the importance of water in maintaining a health body...

- It increases endurance and energy levels
- It aids digestion and elimination
- It regulates body temperature
- It facilitates muscular and nervous activity
- And, it provides the perfect medium to carry nutrients, oxygen, and disease fighting antibodies.

It's no wonder every prescription for health includes drinking six to eight or more glasses of pure water per day!

However, by the time water reaches your tap it usually has traveled through many, many miles of pipe and earth. Along the way, it picks up thousands of impurities including pesticides, industrial and agricultural chemicals, and toxins such as chlorine and fluoride which can be harmful to your health and to the health of your intestinal flora and other friendly bacteria in your body.

The most logical and practical place to control the quality and safety of our drinking water is at the point of consumption. We have found the Reverse Osmosis systems to be the best solution to treat water for the home and office.

How Reverse Osmosis Works

Reverse Osmosis is the process by which ordinary tap water is forced through filters and a special membrane, leaving certain unwanted substances behind. These substances are rinsed away resulting in clear, fresh-tasting drinking water.

Only small water molecules are able to pass through the pores of a reverse osmosis membrane. Toxic and carcinogenic substances such as pesticides, bacteria and viruses have relatively large, complex molecular structures. Larger molecules are unable to pass through the pores of the membrane and are flushed down the drain. A few dissolved gases are able to pass through the pores and are removed by the activated-carbon postfilter.

Best Choice

The best reverse osmosis units we have found are manufactured by Hydrotech. Hydrotech Reverse Osmosis Drinking Water Systems provide under the counter units that are convenient and economical. This unit is typically installed under the kitchen sink. Installation requires connecting this unit to your water supply and drain system.

We are offering two Hydrotech units -- a three-stage economy model and a four-stage model.

The Three-Stage Hydrotech Reverse Osmosis System combines mechanical filtration with reverse osmosis technology for effective water treatment. This model features a Thin Film Composite membrane, a dual purpose sediment and activated carbon pre-filter, post carbon filter, automatic shutoff, chrome standard faucet, and a metal storage tank.

The Four-Stage Hydrotech Reverse Osmosis System combines also mechanical filtration with reverse osmosis technology for effective water treatment. This model features a Thin Film Composite membrane, a sediment filter, a pre-activated carbon filter, post carbon filter, automatic shutoff, chrome standard faucet, and a metal storage tank. This unit is recommended for consumers using non-treated water from wells.

These units are easily maintained. Under normal conditions, the filters should be replaced every six months.
